

## **Expansion Enables ABS to Expand Product Offerings**

*Wallace MI* - Advanced Blending Solutions LLC (ABS), a quality manufacturer of blending and convey equipment for the plastics industry, has expanded its facility in Wallace MI to accommodate increased demand and a growing product line. The expansion features an additional 40,000 square feet of assembly, warehouse, and office space. A road was put in on the back side of the expansion to allow better access for cars and deliveries.

The expansion doubles current cutting and milling spaces, and adds significant square footage to fabrication and assembly areas. It gives ABS the capability to do electro-polishing in-house, for greater quality assurance and quicker turn-around. Additional office space and employee facilities meet the demands of a growing workforce.

ABS is excited for how this expansion will enable them to better serve their customer base.
